RENT A WRECK
used car rental and leasing

As the Marketing and Communications Director for a nationwide chain of over 300 car rental locations, I have had the pleasure of working closely with NCSc for over 9 years developing, hosting and continually enhancing our e-commerce website, internal company intranet and core database. Using the systems developed for us by NCSc, our decentralized network of vehicle rental locations across the country was able to leap into the Internet age, revolutionizing our business and communication processes on architecture developed by NCSc.

The project managers and development team at NCSc have put in countless hours working to understand our business and our challenges, and have developed cost effective and efficient solutions that have benefited our entire operation. With the help of NCSc, our company began taking credit card secured car rental reservations over the internet in 1999, and in 2007 customers booked over $1 million dollars of revenue through the website and back-end database interface developed by NCSc.
When a larger firm acquired our company in late 2005, NCSc aided immeasurably in our transition and has continued to work with our new company to develop innovative solutions to our new business challenges.

The customer service from NCSc has always been prompt and professional. As the person responsible for our company's IT resources, I am confidant in the knowledge that the highest caliber people are protecting our company's IT assets and treating my business with the same care with which they treat their own. Having worked with NCSc's team for over 9 years, I am also confidant in their ability to innovate and evolve our IT assets to keep pace with the ever-increasing pace of business.

I would highly recommend the team at NCSc and am glad to speak with anyone considering utilizing their expertise.
